What is claimed is:

- 1. A method for analyzing cells comprising:
- (a) providing an array of locations which contain multiple cells wherein the cells contain one or more fluorescent reporter molecules;
- 5 (b) scanning multiple cells in each of the locations containing cells to obtain fluorescent signals from the fluorescent reporter molecule in the cells;
 - (c) converting the fluorescent signals into digital data; and
 - (d) utilizing the digital data to determine the distribution, environment or activity of the fluorescent reporter molecules within the cells.
- 10 2. The method of claim 1 wherein the array of locations are wells in a microtiter plate.
 - 3. The method of claim 1 wherein the array of locations are microwells on a microplate.
 - 4. The method of claim 1 wherein the fluorescent reporter is added to the cell.
 - 5. The method of claim 1 wherein the fluorescent reporter is produced by the cell.
- 15 6. The method of claim 1 wherein a computer means converts the digital data into the difference between the average cytoplasmic reporter molecule fluorescent intensity and the average nucleus fluorescent reporter molecule intensity.
 - 7. The method of claim 1 wherein a computer means converts the digital data into the average cytoplasmic fluorescent reporter molecule intensity within the nucleus region.
- 20 8. The method of claim 1 wherein a computer means converts the digital data into the average fluorescent reporter molecule intensity within the cytoplasmic mask.

- 9. The method of claim 1 wherein multiple different fluorescent reporter molecules are in the cell.
- 10. A cell screening system comprising:
- (a) a high magnification fluorescence optical system having an objective lens, an XY stage adapted for holding a plate with an array of locations for holding cells and having a means for moving the plate to align the locations with the microscope objective and a means for moving the plate in the direction to effect focusing;
 - (b) a digital camera;

15

- (c) a light source having optical means for directing excitation light to cells in
 the array locations and a means for directing fluorescent light emitted from the cells to the
 digital camera; and
 - (d) a computer means for receiving and processing digital data from the digital camera wherein the computer means includes:
 - i) a digital frame grabber for receiving the images from the camera,
 - ii) a display for user interaction and display of assay results,
 - iii) digital storage media for data storage and archiving, and
 - iv) means for control, acquisition, processing and display of results.
 - 11. The cell screening system of claim 10 having a PC screen operatively associated with the computer means, for displaying graphs of data and images of cells having fluorescent reporter molecules.
 - 12. The cell screening system of claim 10 wherein the computer means stores the data in a bioinformatics data base.

- 13. The method of claim 1 further comprising scanning multiple cells in each of the array of locations containing cells in high throughput mode, and selectively scanning only a subset of the locations containing cells in a high content mode.
- 14. The cell screening system of claim 10 further comprising an attached reader which measures a signal from the array of locations which contain multiple cells, and a method to transfer both the array of locations which contain multiple cells and the measurements to the cell screening system.
 - 15. The cell screening system of claim 10 wherein the optical means comprise a mechanical-optical means for changing the magnification of the system.
- 16. The cell screening system of claim 10 further comprising a chamber and control system to maintain the temperature, CO₂ concentration and humidity surrounding the array of ocations which contain multiple cells.
 - 17. The cell screening system of claim 10 wherein the optical means comprises a confocal scanning illumination and detection system.
- 18. A machine readable storage medium comprising a program containing a set of instructions for causing a cell screening system to execute the procedures set forth in Figure 9, wherein the cell screening system comprises a high magnification fluorescence optical system with a stage adapted for holding cells and a means for moving the stage, a digital camera, a light source for receiving and processing the digital data from the digital camera, and a computer means for receiving and processing the digital data from the digital camera.

19. A machine readable storage medium comprising a program containing a set of instructions for causing a cell screening system to execute the procedures set forth in Figure 11, wherein the cell screening system comprises a high magnification fluorescence optical system with a stage adapted for holding cells and a means for moving the stage, a digital camera, a light source for receiving and processing the digital data from the digital camera, and a computer means for receiving and processing the digital data from the digital camera.

5

- 20. A machine readable storage medium comprising a program containing a set of instructions for causing a cell screening system to execute the procedures set forth in Figure 12, wherein the cell screening system comprises a high magnification fluorescence optical system with a stage adapted for holding cells and a means for moving the stage, a digital camera, a light source for receiving and processing the digital data from the digital camera, and a computer means for receiving and processing the digital data from the digital camera.
- 15 21. A machine readable storage medium comprising a program containing a set of instructions for causing a cell screening system to execute the procedures set forth in Figure 13, wherein the cell screening system comprises a high magnification fluorescence optical system with a stage adapted for holding cells and a means for moving the stage, a digital camera, a light source for receiving and processing the digital data from the digital camera, and a computer means for receiving and processing the digital data from the digital camera.

- 22. A machine readable storage medium comprising a program containing a set of instructions for causing a cell screening system to execute the procedures set forth in Figure 14, wherein the cell screening system comprises a high magnification fluorescence optical system with a stage adapted for holding cells and a means for moving the stage, a digital camera, a light source for receiving and processing the digital data from the digital camera, and a computer means for receiving and processing the digital data from the digital camera.
- 23. A machine readable storage medium comprising a program containing a set of instructions for causing a cell screening system to execute the procedures set forth in Figure 15, wherein the cell screening system comprises a high magnification fluorescence optical system with a stage adapted for holding cells and a means for moving the stage, a digital camera, a light source for receiving and processing the digital data from the digital camera, and a computer means for receiving and processing the digital data from the digital camera.

15 24. A machine readable storage medium comprising a program containing a set of instructions for causing a cell screening system to execute procedures for detecting the distribution and activity of specific cellular constituents and processes, wherein the cell screening system comprises a high magnification fluorescence optical system with a stage adapted for holding cells and a means for moving the stage, a digital camera, a light source for receiving and processing the digital data from the digital camera, and a computer means for receiving and processing the digital data from the digital camera.

- 25. The machine readable storage medium of claim 24, wherein the specific cellular process comprises the nuclear translocation of a protein.
- 26. The machine readable storage medium of claim 25 wherein said protein comprises a membrane protein.
- 5 27. The machine readable storage medium of claim 24, wherein the specific cellular process comprises cellular hypertrophy.
 - 28. The machine readable storage medium of claim 24, wherein the specific cellular process comprises apoptosis.
 - 29. The machine readable storage medium of claim 24, wherein the specific cellular process comprises protease-induced translocation of a protein.

15

- 30. A machine readable storage medium comprising a program containing a set of instructions for causing a cell screening system to execute procedures for identifying novel receptor agonists and antagonists, wherein the cell screening system comprises a high magnification fluorescence optical system with a stage adapted for holding cells and a means for moving the stage, a digital camera, a light source for receiving and processing the digital data from the digital camera, and a computer means for receiving and processing the digital data from the digital camera.
- 31. A machine readable storage medium comprising a program containing a set of instructions for causing the cell screening system of claim 10 to execute the procedures set forth in Figure 9.

- 32. A machine readable storage medium comprising a program containing a set of instructions for causing the cell screening system of claim 10 to execute the procedures set forth in Figure 11.
- 33. A machine readable storage medium comprising a program containing a set of instructions for causing the cell screening system of claim 10 to execute the procedures set forth in Figure 12.
 - 34. A machine readable storage medium comprising a program containing a set of instructions for causing the cell screening system of claim 10 to execute the procedures set forth in Figure 13.
- 35. A machine readable storage medium comprising a program containing a set of instructions for causing the cell screening system of claim 10 to execute the procedures set forth in Figure 14.
 - 36. A machine readable storage medium comprising a program containing a set of instructions for causing the cell screening system of claim 10 to execute the procedures set forth in Figure 15.

- 37. A machine readable storage medium comprising a program containing a set of instructions for causing the cell screening system of claim 10 to execute procedures for detecting the distribution and activity of specific cellular constituents and processes.
- 38. The machine readable storage medium of claim 37, wherein the specific cellular process comprises the nuclear translocation of a protein.
 - 39. The machine readable storage medium of claim 37 wherein said protein comprises a membrane protein.

- 40. The machine readable storage medium of claim 37, wherein the specific cellular process comprises cellular hypertrophy.
- 41. The machine readable storage medium of claim 37, wherein the specific cellular process comprises apoptosis.
- 5 42. The machine readable storage medium of claim 37, wherein the specific cellular process comprises protease-induced translocation of a protein.
 - 43. A machine readable storage medium comprising a program containing a set of instructions for causing the cell screening system of claim 10 to execute procedures for identifying novel receptor agonists and antagonists, wherein the cell screening system comprises a high magnification fluorescence optical system with a stage adapted for holding cells and a means for moving the stage, a digital camera, a light source for receiving and processing the digital data from the digital camera, and a computer means for receiving and processing the digital data from the digital camera.
